LIV4D – Annotation Platform

Installation Guide

Version 1.0

Prerequisites

1. Install node npm :
   - ➔ https://nodejs.org/en/download/

2. Install and setup the PostgreSQL database:
   - ➔ https://www.postgresql.org/download/
   - ➔ Create an empty database "liv4d"

3. Download or clone the git repository :
   - ➔ https://github.com/LIV4D/AnnotationPlatform

Installation

Open a terminal inside the server directory.

1. Install the server dependencies.
   - ➔ run : "npm install"

2. Create an empty "liv4d" database in postgresql.
   - ➔ in psql CLI, run : "CREATE DATABASE liv4d;"

3. Check the authentication settings to the database
   - ➔ edit the database section in : "server/config/default.json"

4. Initialise the server files.
   - ➔ run : "npm start"
   - ➔ after the server started, kill the process by pressing Ctrl+C

5. Populate the database.
   - ➔ run : "npm run seeding-prod"

Server startup

To startup the server, open a terminal inside the server directory.
- ➔ run : "npm install"
